Stereo Review 1994

Organizational Identity in Practice Lin Lerpold 2012-11-12 Organizational Identity in Practice provides much-needed, in-depth studies on what happens when aspirations, claims and beliefs interact. Given the practical needs of managers and students, this exciting new text provides readers with more insight into what differences in these identity aspirations, claims and beliefs really mean and what we may expect to occur when these differences become visible and what the outcomes of these processes are likely to be. The diverse case studies illustrate how well-known firms have dealt with the broad issues of "who we are as an organization" and "what makes us similar or distinct from others" and cover a broad range of industries, firms, and organizational forms. The cases from companies such as Air France, AT&T, Bang & Olufsen, BP, Statoil, Starbucks, Scania and Alfa Romeo are focused on the broad topics of organizational identity, strategy and the environment, multiple and conflicting identities, the construction of identities, and how organizations express and project their identities. The authors give scholars, students and managers valuable ideas on how to deal with organizational identity challenges within firms.

Materials Experience 2 Owain Pedgley 2021-09-23 Materials Experience 2: Expanding Territories of Materials and Design is the follow-up companion to Materials Experience published in 2014. Materials experience as a concept has evolved substantially and is now mobilized to incorporate new ways of thinking and designing. Through all-new peer-reviewed chapters and project write-ups, the book presents critical perspectives on new and emerging relationships between designers, materials, and artifacts. Subtitled Expanding Territories of Materials and Design, the book examines in depth the increased prevalence of material-driven design practices, as well as the changing role of materials themselves, toward active and influential agents within and outside design processes. The book is essential reading for anyone involved in materials and design, containing 11 authoritative chapters and 18 illustrated accounts of contemporary research projects and practices. Presents both the knowledge and understanding of what 'new and emerging materials' are, where they come from, and how they can be used effectively in design Looks at how the professional responsibility of material selection is evolving into a more complex and active role of material 'creation' and 'appropriation' Explores how an elevated sensitivity to materials influence people's experiences of the designed world

New Scientist 1986-08-21 New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.
