Disabling Perversions Alan Corbett 2018-04-24 The book offers an overview of how to work with some of the most damaged members of society - children and adults with intellectual disabilities who abuse others. Drawing on insight from two decades of clinical work, the author examines how to assess risk and danger in the forensic disability patient, ways of working therapeutically with patients at all ends of the disability spectrum, and how to support members of the patient's network. Combining psychoanalytic, creative, forensic and systemic thinking, the book provides a template for assessing, managing, containing and treating those who present with multiple diagnoses, including cognitive and physical disabilities, mutism, psychiatric disorders and autism. Both group and individual approaches are examined. As our awareness of the incidence of forensic patients who also have disabilities increases, this work is a timely placing of the forensic disability patient onto the clinical agenda, and has a wide application, being of use to clinicians in the private consulting room, the community, the secure setting and the prison.

Therapeutic Uses of Rap and Hip-Hop Susan Hadley 2012-05-22 In perceiving all rap and hip-hop music as violent, misogynistic, and sexually charged, are we denying the way in which it is attentive to the lived experiences, both positive and negative, of many therapy clients? This question is explored in great depth in this anthology, the first to examine the use of this musical genre in the therapeutic context. The contributors are all experienced therapists who examine the multiple ways that rap and hip-hop can be used in therapy by listening and discussing, performing, creating, or improvising. The text is divided into three sections that explore the historical and theoretical perspectives of rap and hip-hop in therapy, describe the first-hand experiences of using the music with at-risk youth, and discuss the ways in which contributors have used rap and hip-hop with clients with specific diagnoses, respectively. Within these sections, the contributors provide rationale for the use of rap and hip-hop in therapy and encourage therapists to validate the experiences for those for whom rap music is a significant mode of expression. Editors Susan Hadley and George Yancy go beyond promoting culturally competent therapy to creating a paradigm shift in the field, one that speaks to the problematic ways in which rap and hip-hop have been dismissed as expressive of meaningless violence and of little social value. More than providing tools to incorporate rap into therapy, this text enhances the therapist's cultural and professional repertoire.

Developments Erica Burman 2008-02-19 How does developmental psychology connect with the developing world? What do cultural representations tell us about the contemporary politics of childhood? What is the political economy of childhood? This companion volume to Burman's *Deconstructing Developmental Psychology* helps us to explain why questions around children and childhood - their safety, their sexuality, their interests and abilities, their violence - have so preoccupied the late twentieth and twenty-first centuries. In this increasingly post-industrial, post-colonial and multicultural world, this book identifies analytical and practical strategies for improving how we think about and work with children. Drawing in particular on feminist and postdevelopment literatures, the book illustrates how and why reconceptualising our notions of individual and human development, including those informing models of children's rights and interests, will foster more just and equitable forms of professional practice with children and their families. The book brings together completely new, previously unpublished material alongside revised and updated papers to present a cutting-edge and integrated perspective to the field. Burman offers a key contribution to a set of urgent debates engaging theory and method, policy and practice across all the disciplines that work with, or lay claim to, children's interests. *Developments* presents a coherent and persuasive set of arguments about childhood, culture and professional practice so that the sustained focus across a range of disciplinary arenas (psychology, education, cultural studies, child rights, gender studies, development policy and practice, social policy) strengthens the overall argument of each chapter. It will be invaluable to teachers and students in psychology, childhood studies and education as well as researchers in gender studies. It will also be a must-read for

professionals working with children and adolescents.

A Therapist's Guide to Treating Eating Disorders in a Social Media Age Shauna Frisbie 2020-09-08 An innovative therapeutic approach for counteracting the impact of social media on eating disorders and identity formation. All humans need space to think, to be, and to process without constant distraction. This is especially true of adolescents and young adults, for whom identity formation is a consuming task. Social media has generated both a place for the creation of identity and an audience. But constant connection leaves little space without intrusion from others. For those with body dissatisfaction and/or eating disorders, living in today's world can be especially challenging, and viewing images on social media and other online formats can be devastating. Shauna Frisbie utilizes phototherapy techniques to view client-selected images (whether they be of themselves or others) to help uncover underlying messages that are impacting their relationship to their bodies. Integrating concepts of healing narratives, neuroscience, and phototherapy, this book will help any therapist promote self-compassion, self-reflection, and healing in their clients.

Ageing and Popular Culture Andrew Blaikie 1999-03-04 As the 'grey market' perpetuates the quest for eternal youth, the biological realities of deep old age are increasingly denied. Ageing and Popular Culture traces the historical emergence of stereotypes of retirement and documents their recent demise, arguing that although modernisation, marginalisation, and medicalisation created rigid age classifications, the rise of consumer culture has coincided with a postmodern broadening of options for those in the Third Age. With an adroit use of photographs and other visual sources, Andrew Blaikie demonstrates that an expanded leisure phase is breaking down barriers between mid and later life. At the same time, 'positive ageing' also creates new imperatives and new norms with attendant forms of deviance. While babyboomers may anticipate a fulfilling retirement, none relish decline. Has deep old age replaced death as the taboo subject of the late twentieth century? If so, what might be the consequences?

Revisiting Feminist Approaches to Art Therapy Susan Hogan 2012-06-15 Art therapy has been slow to embrace the critical and theoretical viewpoints, including feminism, that have made a huge impact on other areas of the humanities and social sciences. Art therapists are ideally situated, however, to respond to the growing awareness of how language, media and images influence gender inequality and the pressures that can lead to poor mental health, and diminished well being, among women. The contributors explore the ways in which gender issues can be addressed through art therapy. By being sensitive to the socio-cultural dimensions of women's lives, therapists can become more receptive to the needs of their female clients. The case studies included here illustrate how issues of class, ethnicity and gender introduce a social element into what is sometimes described as a purely personal, cathartic process. By discussing

empowerment, sexuality, pregnancy and childbirth, this volume provides a comprehensive survey of women's issues within art therapy and will prompt a reevaluation of current training and practice in the field.

Exploring the Self Through Photography Claire Craig 2009 Photography shows us how to look at things from different perspectives, to reflect, to communicate and to express ourselves in a way that goes beyond words. The creative and introspective qualities of this accessible arts medium make it an ideal tool for use in therapeutic contexts. In this book, Claire Craig explores how professionals working with groups can use photography to promote self-exploration and positive change. She explains how the technique works, who it can help, and how to set up and run a group. Each chapter revolves around a key self-development theme, such as communication, reflection, relationship-building and self-esteem, and contains activities which are suitable for all ages and abilities. For each activity, requirements are clearly specified, and both a warm-up and extension activity offered. Along the way, examples of photographs taken by participants in response to particular themes, and the explanations which accompany them, are provided as inspiration. This practical guide can be used in group work across a broad range of contexts, including in schools, colleges, youth groups, community settings, residential care, in-patient and day hospitals. It will be of interest to occupational therapists, arts therapists, social workers, teachers and any other practitioners interested in ways of promoting personal development through creative means.

Issues are explored with reference to the Codes of Practice for Social Care Workers, National Occupational Standards and examples of interdisciplinary

working across contexts.

Therapeutic Uses of Storytelling Camilla Asplund Ingemark 2013-12-03 How can stories and legends, written and oral, help people suffering from severe traumas or harsh conditions, now or in the past? Can storytelling help us sort out our innermost feelings and troubles? This deeply human subject is relevant not only to practitioners of psychotherapy, but to all of us, as we sometimes go through difficult times in life. In *Therapeutic Uses of Storytelling*, a cross-disciplinary group of researchers examine the ways in which narrative might aid in coping with difficult situations in life, and with the emotions that these situations engender. Starting with an introduction to basic narrative theories and the therapeutic effects of storytelling, the book then moves on to a series of lucid case studies. The authors present a diversity of material such as blogs, poetry, magazines, memoirs, and oral accounts from Antiquity to the present. Authors from several different disciplines make for a diversity of perspectives. The authors specialise in folkloristics, psychology, writing studies, poetry therapy, and classical studies. Psychologists, social workers, researchers, therapists – all can benefit from this book, including everyone interested in the possibility of inner exploration through stories.
