The Ophthalmic Scribe Manual Parker J Williams 2019-04-29 Product Description The Ophthalmic Scribe Manual is the ultimate how-to manual for learning to scribe in ophthalmology. If you're interested in learning more about scribing in retina, cornea, comprehensive, glaucoma, or oculoplastics, this manual has you covered. Inside, you will find over 100 full-color figures and tables illustrating the most important concepts, Anatomy & Physiology, organized high-yield abbreviations, must know medications, must know imaging modalities, and high-yield specialty-specific pathology. About the Author After graduating with a Bachelor of Science in Biology from the University of North Carolina at Chapel Hill and prior to enrolling in medical school, my job search brought me back home to Atlanta where I accepted a position as an Ophthalmic Medical Scribe. I had no prior experience as a scribe or in the healthcare field, but I knew that quickly improving my understanding of ophthalmology would be essential for my success. I searched the web to obtain every piece of relevant ophthalmology information that I could find, and I spent hours experimenting with the functionalities of the eye clinic's electronic medical record to better prepare myself for my new role. However, I found that it took a significant amount of time and effort to sift through the excessive online information before I was able to hone in on the relevant material. Due to the lack of designated ophthalmic medical scribe training resources and the vast amount of irrelevant information online, I decided that the creation of The Ophthalmic Scribe Manual was warranted. With over 3 years of scribing experience and over 20,000 patient encounters, as well as having published a variety of first author case reports and review articles in prominent ophthalmic medical journals, I am confident that my experiences will offer an immediate benefit to those seeking to excel in this rewarding profession. Review "Very well-written! This looks terrific and will be great for widespread use particularly in training programs, especially with the growing need for trained ophthalmic personnel."

Making Eye Health a Population Health Imperative National Academies of Sciences, Engineering, and Medicine 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. **Making Eye Health a Population Health Imperative: Vision for Tomorrow** proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
