50 Studies Every Ophthalmologist Should Know Alan Penman 2020 "50 Ophthalmology Studies Every Ophthalmologist Should Know" succinctly summarizes the most important and clinically relevant studies published in the mainstream ophthalmology literature in the past 40 years. Emphasis has been placed on landmark studies, rather than studies that are most frequently cited, which changed thinking and practice in the field. Most are randomized controlled trials that have helped shape current ophthalmology practice guidelines; However, some important observational (cohort, case-control, and descriptive) studies are also included. The book is divided into 7 sections, corresponding to anatomical segment or disease of the eye (cornea, cataract, glaucoma, vitreoretinal, macula, uveal tract, and orbit/eyelids/extraocular muscles/optic nerve). Each chapter finishes with an illustrative clinical case. Ophthalmology has a particular relevance to physicians working in primary care, internal medicine, neurology, neurosurgery, pediatrics, and emergency medicine. For ophthalmologists, each chapter has a reference to the relevant section of the practice guidelines of the American Academy of Ophthalmology"--

Textbook Of Occupational Medicine Practice (Fifth Edition) David Soo Quee Koh 2022-04-07 Following the success of the fourth edition, which was highly commended in the primary health care category for the 2018 British Medical Association (BMA) Medical Book Awards, this fifth edition has been substantially revised and updated to reflect significant changes in health care practice and to incorporate the explosion of information since the advent of the fourth industrial revolution and the COVID-19 pandemic. As before, the book covers target organ systems that can be affected by hazardous exposures in traditional industries and modern workplaces, both of which coexist in different parts of the world and present unique occupational health challenges for the medical practitioner. To this end, this reference textbook focuses on the clinical presentations, investigations, and medical and work-centric management of affected individuals. We have retained consideration of some special issues relevant to occupational medicine practice in this new edition and included a new section relating to the multidisciplinary nature of occupational health practice. The main emphasis continues to be prevention of disease and early detection of health effects caused by work exposures. This edition of the book has been updated to include new information and references. We have kept some of the previous case studies and illustrations, and

introduced several new ones, some of which reflect the changes of practice due to the COVID-19 pandemic — for example, in risk communication, recognition and management of the risks of health care and frontline work. We have again asked international experts in occupational medicine and cross-disciplinary medical specialties to jointly author many of the chapters. Some of the authors are from Asia, and others from Europe, the United States, United Kingdom and Australia. All the authors have either clinical and/or academic experience in, or related to occupational medicine practice. The book is targeted at all those who are interested in the interaction between work and health, and how occupational diseases and work-related disorders may present and be managed. It will be of interest to medical practitioners, especially those in primary care and doctors intending to pursue a career in occupational medicine. It would also be relevant for allied health and safety professionals wanting to know more about health effects resulting from occupational exposures. Other groups who may find this edition useful as a ready reference are medical students, occupational health nurses, or clinical specialists in diverse fields such as dermatology, respiratory medicine, infectious diseases or toxicology.

A Synopsis of Ophthalmology John Lionel Cyril Martin-Doyle 1975

Tumors in Domestic Animals Donald J. Meuten 2008-06-02 Since the third edition of Tumors of Domestic Animals there has been an enormous expansion of our knowledge about the molecular mechanisms of tumor development and the ancillary aids used to diagnose neoplasms. The fourth edition condenses this new body of information and presents it in a way that is useful to diagnostic pathologists, residents, veterinarians, and oncologists. The format of the previous editions has been maintained, but the text and the illustrations are substantially changed or entirely different. Readers will be able to find salient clinical information, prevalence data, biological behavior, and most importantly, accurate information about gross and microscopic lesions to help diagnostic pathologists establish an accurate morphological diagnosis. The editor and authors of Tumors of Domestic Animals, all recognized experts in their fields, recognize the need for accurate morphological diagnoses in veterinary patient care, particularly with the numerous treatment modalities now available to oncologists and owners. This landmark reference in veterinary pathology provides the applicable information that clinical veterinarians need and want to make decisions about treatment of the animals in their care.
