Modelling in Natural Sciences Tibor Müller 2003-02-14 This book defines the wide application of the art of modelling. The main emphasis is on the imaging of dynamic processes which are analysed and subdivided into their atomic constituents by means of systems analysis. The cyclic structure and the stages of models' set-up are explained. The evaluation of a model's quality is regarded as a stochastic process. The aspects of grade used in different fields of sciences are brought into perspective. Thus, a quantitative concept of validity on the basis of conditional degrees of rational belief can be developed.

Chemical Structure and Reactivity: An Integrated Approach  
rises to the challenge of depicting the reality of chemistry.

Offering a fresh approach, it depicts the subject as a  
seamless discipline, showing how organic, inorganic, and  
physical concepts can be blended together to achieve the  
common goal of understanding chemical systems.
