The Zones of Regulation Leah M. Kuypers 2011 "... a curriculum geared toward helping students gain skills in consciously regulating their actions, which in turn leads to increased control and problem solving abilities. Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.

Sensory Integration Christy Isbell 2010-05-07 Do you have a child in your early childhood classroom who: Climbs on top of furniture and jumps off? Covers his ears when children are singing? If so, it is possible this child is having trouble with sensory integration. How can teachers help children with these problems so they can enjoy learning and grow in positive ways? The Sensory Integration Book helps identify children who have difficulties with sensory processing and offers preschool teachers simple, easy-to-use solutions to support the sensory needs of young children in the preschool classroom. From Neurons to Neighborhoods National Research Council 2000-11-13 How we raise young children is one of today's most highly personalized and sharply politicized issues, in part because each of us can claim some level of "expertise." The debate has intensified as discoveries about our development-in the womb and in the first months and years-have reached the popular media. How can we use our burgeoning knowledge to assure the well-being of all young children, for their own sake as well as for the sake of our nation? Drawing from new findings, this book presents important conclusions about nature-versus-nurture, the impact of being born into a working family, the effect of politics on programs for children, the costs and benefits of intervention, and other issues. The committee issues a series of challenges to decision makers regarding the quality of child care, issues of racial and ethnic diversity, the integration of children's cognitive and emotional development, and more. Authoritative yet accessible, From Neurons to Neighborhoods presents the evidence about "brain wiring" and how kids learn to speak, think, and regulate their behavior. It examines the effect of the climate-family, child care, community-within which the child grows.

Learning disabilities screening and evaluation guide for low- and middle-income countries Anne M. Hayes 2018-04-29 Learning disabilities are among the most common disabilities experienced in childhood and adulthood. Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.

Diagnosis and Treatment of Autism C. Gillberg 2013-06-29 In 1987, The Swedish Medical Research Council's Group for Evaluation of Medical Technology approached me on the subject of organizing a conference on Autism - Diagnosis and Treatment. The original idea for this conference had come from a Stockholm politician, Leni Bjorklund, who had felt that, at least in Sweden, autism appeared to be an area in which conflicting views on etiology and treatment had led to children and parents not always receiving adequate help. Professors Agne Larsson, MD, Tore Schersten, MD and Bjorn Smedby, MD in particular showed a keen interest and it was decided to hold a State-of-the-Art-Conference on autism in Gothenburg. The State-of-the-Art-Conference on Autism -Diagnosis and Treatment was held in Gothenburg May 8 -10, 1989. A panel of international experts was selected because of outstanding research or clinical activity in the field and in order to represent a wide variety of professional and theoretical approaches ranging from epidemiology, neurobiology and cognitive psychology to psychiatry, neurology, education, behavioural treatment and psychoanalysis. A group of professional observers involved in the field of autism was chosen so as to cover Sweden in a representative fashion. This group consisted of administrators, child psychiatrists, psychologists, social workers, pediatricians, nurses and teachers.

Playful Learning Lab for Kids Claire Heffron 2018-11-06 Playful Learning Lab for Kids is a hands-on activity book that offers games and activities that revolve around the senses and concepts in reading, math, art, and science. Recent research has shown that children learn and develop new skills more quickly when they engage in playful, whole body activities. Movement allows them to refocus their attention, improves brain function, reduces stress, and improves circulation. Not only that, but the more senses that are used for learning, the more likely information is to be stored and retrieved. The activities in Playful Learning Lab for Kids explore concepts in reading, language, math, art, music, science, geography, and social studies, all while engaging children with movements, touch, sound, and sight. Most distinguishing of all, the activities and lessons here include suggestions for tailoring the experience to different levels, making it a book children can grow with. The skills range from visual perceptual skills and spatial awareness, to early geometry concepts, visual motor integration, and fine motor skills. Authors Claire Heffron and Lauren Drobnjak, pediatric occupational and physical therapists with years of experience in clinical and school-based settings, share their best tips and strategies for helping little learners reach their fullest potential through these engaging and fun activities. The popular Lab for Kids series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids.

Making Eye Health a Population Health Imperative National Academies of Sciences, Engineering, and Medicine 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.
