MEDLARS and Health Information Policy United States. Congress. Office of

Technology Assessment 1982 The objectives of this technical memorandum are 2 fold: to examine the US National Library of Medicine's (NLM) role in the creation and distribution of computerized health related bibliographic information in light of the private sector's presence in this field and the public interest; and to examine MEDLARS' effectiveness in disseminating bibliographic health related information. 5 chapters describe the development, current status, and future plans for MEDLARS databases and online services; discuss system issues related to the effectiveness of MEDLARS in disseminating bibliographic health related information; review private sector health related databases and commercial information services; focus on the considerations underlying the current debate on the appropriate role of the government in information transfer; and analyze the domestic and international implications of changing the range and pricing structure of MEDLARS computerized products and services. Since its inception, MEDLARS has become more sophisticated, accessible, and inclusive, and MEDLARS 2, the library's current system, is utilized more than any other system by health communities in the US and abroad. The development of MEDLARS parallels the evolution in medical bibliography that began in the 1950s with the 1st

attempt to apply computer technologies to information processing. The system's 1st database, MEDLINE, was a byproduct of the computerized production of the printed "Index Medicus." "Index Medicus" continues to provide physicians and other health professionals the major access to biomedical literature worldwide. NLM is continuously refining MEDLARS 2 to extend its capabilities. The system has evolved into a complex multiprocessing system that maintains data files, provides online retrieval services, and produces computer photocomposed publications. MEDLARS 2 contains almost 20 databases. The machine readable data tape that is the source of data for MEDLINE is used to produce "Index Medicus" and other publications. MEDLINE, with its related backfiles, is the largest database in MEDLARS and is the most extensively used. Literature selection is used as a quality filter for the indexed biomedical literature database. The selection process is highly structured and involves a critical review of the literature by a panel of expert consultants. In fiscal year 1981, NLM conducted over 2 million online searches, fully 1/3 of all such searches performed in the US. MEDLARS 2 allows for direct communication with the computer in online, interactive fashion.

techniques have evolved to allow a growing number of older adults to undergo surgery, and current estimates are that 50% of Americans over the age of 65 years old will have an operation. However, as the knowledge regarding perioperative care of the elderly surgical patient grows, so do the questions. In this edition, each chapter includes a section entitled “Gaps in Our Knowledge,” meant to highlight areas in which research is needed, as well as hopefully inspire readers to begin solving some of these questions themselves. Building upon the strong foundation of the first two editions, *Geriatric Anesthesiology*, 3rd edition also assembles the most up-to-date information in geriatric anesthesia and provides anesthesiologists with important new developments. Topics covered include several new chapters that reflect the evolution of multidisciplinary geriatric care throughout the perioperative continuum, as well as the growing body of literature related to prehabilitation. In addition, discussion of the surgeon’s perspective and geriatrician’s perspective on surgery in the geriatric population is covered, as well as the systematic physiologic changes associated with aging and the pharmacologic considerations for the geriatric patient undergoing procedures. Finally, the last section discusses postoperative care specific to the geriatric population,

including acute pain management, ICU management, recent evidence and up-to-date practice regarding delirium and postoperative cognitive dysfunction, and palliative care.

Stepping Stones of Leadership Jim Zelem 2020-07-19 Leadership is like parenting as there isn't an actual manual on it. Becoming an effective leader is a process. You learn and get better as you gain more experience. Experience is an excellent teacher. There are many books and seminars on this topic

because it is such a fluid topic. Most book, seminar, webcast, etc. out there is by a well-known person that was an effective leader. Their teachings are based on their experiences. Plus, many of these are directed to large organizations. Well, the "Stepping Stones of Leadership" was written by an average person. This book is based on the author's experiences and what he believed to be the foundation of leadership throughout my 25+ years of becoming an effective leader. Looking back, believing he transitioned from being more of a boss to a leader. This book is for both the experienced leader and a person just entering into the position. Too often, people are thrown into leadership roles based on their performance with little knowledge of being an effective leader. There is a "stepping stone" dedicated to the basic things a new leader should know. The book is full of examples and actual stories to support each topic.

SPECT and SPECT/CT Chun Kim 2017-05-24 Internationally renowned authorities in the field of hybrid imaging contribute firsthand expertise on the practical application of single-photon emission computed tomography (SPECT) and SPECT/CT. By combining clear anatomic markers from CT with functional knowledge from SPECT, SPECT/CT provides added value for patient evaluation and is becoming increasingly prevalent in routine clinical practice. Indeed, hybrid imaging is touted by many as a game changer in nuclear medicine. The first two chapters of this book provide a foundation for

understanding SPECT and SPECT/CT technological principles, including the associated radiopharmaceuticals. The remaining chapters detail the utility of SPECT and SPECT/CT in clinical practice including neuroscience and pediatrics, as well as specific pathologies. The book concludes with in-depth discussion of select case studies. Key Features Efficacious use of SPECT and SPECT/CT for primary body systems, including the central nervous, cardiovascular, respiratory, and skeletal systems Value for the assessment of neoplastic disease, infection/inflammation, thyroid and parathyroid gland disorders Fourteen high-quality videos delineate specific techniques and clinical applications Meticulous, four-color graphics clearly elucidate key concepts Illustrative case studies offer educational teaching pearls Together, the concise, evidence-based text and wealth of SPECT/CT images deliver a solid knowledge base, enabling practitioners to learn the effective use of this technology. This must-have book is certain to be an invaluable resource for a diverse spectrum of practicing and trainee clinicians in fields such as radiology, nuclear medicine, and radiation oncology.

Quality Through Collaboration Institute of Medicine 2005-04-24 Building on the innovative Institute of Medicine reports To Err Is Human and Crossing the Quality Chasm, Quality Through Collaboration: The Future of Rural Health offers a strategy to address the quality challenges in rural communities. Rural America is a vital, diverse component of the American community, representing nearly 20% of the population of the United States. Rural communities are heterogeneous and differ in population density, remoteness from urban areas, and the cultural norms of the regions of which they are a part. As a result, rural communities range in their demographics and environmental, economic, and social characteristics. These differences influence the magnitude and types of health problems these communities face.

Quality Through Collaboration: The Future of Rural Health assesses the quality of health care in rural areas and provides a framework for core set of services and essential infrastructure to deliver those services to rural communities. The book recommends: Adopting an integrated approach to addressing both personal and population health needs Establishing a stronger health care quality improvement support structure to assist rural health systems and professionals Enhancing the human resource capacity of health care professionals in rural communities and expanding the preparedness of rural residents to actively engage in improving their health and health care Assuring that rural health care systems are financially stable Investing in an information and communications technology infrastructure It is critical that existing and new resources be deployed strategically, recognizing the need to improve both the quality of individual-level care and the health of rural communities and populations.
