Traffic Secrets Russell Brunson 2020-03-26 Master the evergreen traffic strategies to fill your website and funnels with your dream customers in this timeless book from the $100M entrepreneur and co-founder of the software company ClickFunnels. The biggest problem that most entrepreneurs have isn't creating an amazing product or service; it's getting their future customers to discover that they even exist. Every year, tens of thousands of businesses start and fail because the entrepreneurs don't understand this one essential skill: the art and science of getting tra-ffic (or people) to find you. And that is a tragedy. Traffic Secrets was written to help you get your message out to the world about your products and services. I strongly believe that entrepreneurs are the only people on earth who can actually change the world. It won't happen in government, and I don't think it will happen in schools. It'll happen because of entrepreneurs like you, who are crazy enough to build products and services that will actually change the world. It'll happen because we are crazy enough to risk everything to try and make that dream become a reality. To all the entrepreneurs who fail in their first year of business, what a tragedy it is when the one thing they risked everything for never fully gets to see the light of day. Waiting for people to come to you is not a strategy. Understanding exactly WHO your dream customer is, discovering where they're congregating, and throwing out the hooks that will grab their attention to pull them into your funnels (where you can tell them a story and make them an offer) is the strategy. That's the big secret. Traffic is just people. This book will help you find YOUR people, so you can focus on changing their world with the products and services that you sell.

When Psychological Problems Mask Medical Disorders James Morrison 1999-11-01 From decreased alertness and apathy to agitation, suspicion, and hallucinations, a wide range of psychological symptoms may sometimes point toward serious medical disorders. Helping clinicians "think outside the mental health box," James Morrison provides a clear and systematic guide to the effects upon mental status of 60 health conditions, including heart disease, cancer, and stroke. This practical book will help readers hone their diagnostic skills and recognize when a physician's evaluation may be urgently needed.

Advanced IT Tools Nobuyoshi Terashima 2013-11-18 TRACK 1: Innovative Applications in the Public Sector The integration of multimedia based applications and the information superhighway fundamentally concerns the creation of a communication technology to support the ac tivities of people. Communication is a profoundly social activity involving interactions among groups or individuals, common standards of exchange, and national infrastruc tures to support telecommunications activities. The contributions of the invited speakers and others in this track begin to explore the social dimension of communication within the context of integrated, information systems for the public sector. Interactions among businesses and households are described by Ralf Strauss through the development within a real community of a "wired city" with information and electronic services provided by the latest telecommunications technologies. A more specific type of interaction between teacher and student forms the basis of education. John Tiffin demonstrates how virtual classrooms can be used to augment the educational process. Carl Loeffler presents yet another perspective on interaction through the integration of A-life and agent technologies to investigate the dynamics of complex behaviors within networked simulation environments. Common standards for communication in the form of electronic documents or CSCW (Computer Supported Cooperative Work), according to Roland Traunmiiller, provide en abling technologies for a paradigm shift in the management of organizations. As pointed out by William Olle, the impact of standardization work on the future of information technology depends critically upon the interoperability of software systems.

Boss Mustang Donald Farr 2019-04-23 The Ford Boss Mustang is the most iconic pony car ever created, and this book covers it more extensively than any other. Boss Mustang: 50 Years—a fully expanded version of Mustang Boss 302—includes the complete history of its creation; racing and street histories of both the 302 and 429 models; and photos and interviews with Boss Mustang designers, engineers, racers, and more. Of all the legendary names in the history of the Ford Mustang, one stands apart: Boss. Originally created to homologate the new Boss 302 engine and option package for SCCA Trans-Am racing, the Mustang Boss 302 debuted for the 1969 model year and was built in limited numbers for the street through 1970. This book features never-before-seen production and racing photography, interviews with designers and engineers, and keen insight from author Donald Farr, a renowned Ford historian and Ford hall-of-fame inductee. Designed by the legendary Larry Shinoda, the Boss cars were easily distinguished from their less potent stablemates by their race-bred powerplant, standard front spoiler, and bold graphics. In 2012, Ford at long last revived this most revered of all Mustang models. With a new racing counterpart and a modern street version that delivers more than 440 horsepower, the Boss was truly back! In 2013, Ford rolled out the Boss one more time. In Boss Mustang: 50 Years, Mustang historian Donald Farr offers a complete history of the car—from its late 1960s origins in Ford's boardrooms through its Trans-Am successes and untimely demise in 1970, up to the conception and development of the spectacular, limited-edition 2012 and 2013 Boss Mustangs. Packed with brilliant photography and firsthand accounts from the people who created the original Boss, as well as the team that resurrected Ford's most iconic Mustang for the 21st century, this is the story every Mustang enthusiast has been waiting to read.

DSM-5 Made Easy James Morrison 2014-04-11 In this indispensable book, master diagnostician James Morrison presents the spectrum of diagnoses in DSM-5 in an accessible, engaging, clinically useful format. Demystifying DSM-5 criteria without sacrificing accuracy, the book includes both ICD-10-CM and ICD-9-CM codes for each disorder. It also includes the Global Assessment of Functioning (GAF) Scale (from DSM-IV-TR), with a clear rationale for its continued use. More than 130 detailed case vignettes illustrate typical patient presentations; down-to-earth discussions of each case demonstrate how to arrive at the diagnosis and rule out other likely possibilities. Providing a wealth of diagnostic pointers, Morrison writes with the wisdom and wit that made his guide to the prior DSM a valued resource for hundreds of thousands of clinicians. His website (www.guilford.com/jm) offers additional discussion and resources related to psychiatric diagnosis and DSM-5.

Nothing Left to Steal Mzilikazi wa Afrika 2014-08-20 This tell-all memoir reveals the details behind Sunday Times journalist Mzilikazi wa Afrika's exposure of the R1.7 billion lease scandal between police commissioner Bheki Cele and property tycoon Roux Shabangu, for which he was infamously arrested in 2010. It is also the riveting account of how a neglected boy in an unknown village became one of South Africa's most awarded investigative reporters and found himself at the receiving end of the corruption that had defeated those he helped put in power. Fearless in the face of corrupt authorities with sinister political motives, and fervent about justice, Wa Afrika's life was characterised by resistance to oppression and inequality from an early age. Destined to defend and uphold the principles of democracy, his story is the inspiring tale of an ordinary man, armed with a pen, who challenged the proverbial giant.

The Smart Money Michael Konik 2006-11-14 A riveting inside look at the lucrative world of professional high-stakes sports betting by a journalist who lived a secret life as a key operative in the world's most successful sports gambling ring. When journalist Michael Konik landed an interview with Rick "Big Daddy" Matthews, the largest bet he'd placed on a sporting event was $200. Konik, an expert blackjack and poker player, was no stranger to Vegas. But Matthews was in a different league: the man was rumored to be the world's smartest sports bettor, the mastermind behind "the Brain Trust," a shadowy group of gamblers known for their expertise in beating the Vegas line. Konik had heard the word on the street -- that Matthews was a snake, a conniver who would do anything to gain an edge. But he was also brilliant, cunning, and charming. And when he asked Konik if he'd like to "make a little money" during the football season, the writer found himself seduced . . . So began Michael Konik's wild ride as an operative of the elite Brain Trust. In The Smart Money, Konik takes readers behind the veil of secrecy shrouding the most successful sports betting operation in America, bypassing the myths and the rumors, going all the way to its innermost sanctum. He reveals how they -- and he -- got rich by beating the Vegas lines and, ultimately, the multimillion-dollar offshore betting circuit. He details the excesses and the betrayals, the horse-trading and the paranoia, that are the perks and perils of a lifestyle in which staking inordinate sums of money on the outcome of a single event -- sometimes as much as $1 million on a football game -- is a normal part of doing business.

Intelligent Projects Using Python Santanu Pattanayak 2019-01-31 Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key FeaturesA go-to guide to help you master AI algorithms and concepts8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillanceUse TensorFlow, Keras, and other Python libraries to implement smart AI applicationsBook Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learnBuild an intelligent machine translation system using seq-2-seq neural translation machinesCreate AI applications using GAN and deploy smart mobile apps using TensorFlowTranslate videos into text using CNN and RNNImplement smart AI Chatbots, and integrate and extend them in several domainsCreate smart reinforcement, learning-based applications using Q-LearningBreak and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. Weighing the Odds in Sports Betting King Yao 2007 Sports betting can be attacked intelligently. Smart sports bettors do not gamble the same way as tourists play roulette or retirees play the slot machines. Instead, smart sports bettors are making bets that they have thought through carefully with supporting logic and/or research. The purpose of this book is to give you tools to succeed at sports betting, to show you how to evaluate, compare and view sports betting from an analytical perspective, not from a gambling perspective.

DSM-IV Made Easy James R. Morrison 1995-01 With the publication of DSM-IV, mental health practitioners are faced with the challenge of quickly learning a whole new set of diagnostic standards. Providing a simple way rapidly to become conversant with all DSM-IV categories as well as its many new criteria, this book translates DSM-IV data into a concise, accessible format, explicating and illustrating all the criteria in clear, jargon-free language. It discusses, illustrates, and interprets the criteria for every DSM-IV diagnosis. Over 100 vivid case histories give the reader a flavor of the disorder described and provide a framework for understanding the diagnostic criteria. In each, the author walks the reader through the process in step-by-step detail, discussing how he arrives at a five-axis diagnosis. Helpful features include quick guides at the beginning of every chapter pointing the way to the sought after diagnosis; tips highlighting information that will help clinicians make the diagnosis; sidelights containing historical information and other interesting facts, and editorial comments discussing diagnosis, patients, and clinical issues. This book will be invaluable to all mental health clinicians who want a quick and painless way to learn the DSM-IV criteria, psychologists and social workers studying for their state licensing exam, and graduate students taking courses in abnormal behavior and psychopathology.

Command Lines Jeremy Douglass 2007 The Interactive Fiction (IF) genre describes text-based narrative experiences in which a person interacts with a computer simulation by typing text phrases (usually commands in the imperative mood) and reading software-generated text responses (usually statements in the second person present tense). Re-examining historical and contemporary IF illuminates the larger fields of electronic literature and game studies. Intertwined aesthetic and technical developments in IF from 1977 to the present are analyzed in terms of language (person, tense, and mood), narrative theory (Iser's gaps, the fabula/sjuzet distinction), game studies/ludology (player apprehension of rules, evaluation of strategic advancement), and filmic representation (subjective POV, time-loops). Two general methodological concepts for digital humanities analyses are developed in relation to IF: implied code, which facilitates studying the interactor's mental model of an interactive work; and frustration aesthetics, which facilitates analysis of the constraints that structure interactive experiences. IF works interpreted in extended "close interactions" include Plotkin's Shade (1999), Barlow's Aisle (2000), Pontious's Rematch (2000), Foster and Ravipinto's Slouching Towards Bedlam (2003), and others. Experiences of these works are mediated by implications, frustrations, and the limiting figures of their protagonists.

Playing the Past Zach Whalen 2008 Playing the Past brings together a group of interdisciplinary scholars to examine the complementary notions of history and nostalgia as they are expressed through video games and in gaming culture. The scope of these related concepts moves from the personal to the cultural, and essays in this collection address video game nostalgia as both an individual and societal phenomenon, connecting the fond memories many of us have of classic gaming to contemporary representations of historical periods and events in video games. From Ms. Pac-Man and Space Invaders to Call of Duty and JFK: Reloaded, the games many of us have played since childhood inform how we see the world today, and the games we make and play today help us communicate ideas about real world history. By focusing on specific games, historical periods and media ecologies, these essays collectively take an in depth look at the related topics of nostalgia for classic gaming, gaming and histories of other media, and representations of real history in video games.

Salesforce Handbook Wes Nolte 2011-03-01 This book is not intended to be a deep-dive on security, programming, reporting, configuration, etc. but more of a high-level overview on salesforce.com, Force.com development, tools, methodology and other resources. We will not cover all aspects of salesforce.com. We wrote this book to (hopefully) become an invaluable resource for anyone new or inexperienced with the Force.com platform. For new administrators and developers coming on to the platform, we see a gaping hole in existing reference books. This book is not intended for end users or advanced developers. This book is for people somewhere in the middle; let's say a business analyst or a new Java or .NET developer. We would like this to be the first book you pick up after your boss walks in and says, "Let's take a look at salesforce.com and see if we can build some applications in the cloud."This book contains the information that we wish we had when we started developing applications on Force.com.

Dotcom Secrets Russell Brunson 2020-04-13 Master the science of funnel building to grow your company online with sales funnels in this updated edition from the $100M entrepreneur and co-founder of the software company ClickFunnels. DotCom Secrets is not just another "how-to" book on internet marketing. This book is not about getting more traffic to your website--yet the secrets you'll learn will help you to get exponentially more traffic than ever before. This book is not about increasing your conversions--yet these secrets will increase your conversions more than any headline tweak or split test you could ever hope to make. Low traffic or low conversion rates are symptoms of a much greater problem that's a little harder to see (that's the bad news), but a lot easier to fix (that's the good news). What most businesses really have is a "funnel" problem. Your funnel is the online process that you take your potential customers through to turn them into actual customers. Everyone has a funnel (even if they don't realize it), and yours is either bringing more customers to you, or repelling them. In this updated edition, Russell Brunson, CEO and co-founder of the multimillion-dollar software company ClickFunnels, reveals his greatest secrets to generating leads and selling products and services after running tens of thousands of his own split tests. Stop repelling potential customers. Implement these processes, funnels, frameworks, and scripts now so you can fix your funnel, turn it into the most profitable member of your team, and grow your company online.

Computer Game Worlds Claus Pias 2017-09-15 Computer games have become ubiquitous in today's society. Many scholars have speculated on the reasons for their massive success. Yet we haven't considered the most basic questions: Why do computer games exist? What specific circumstances led to the creation of this entirely new type of game? What sorts of knowledge facilitated the requisite technological and institutional transformations? With Computer Game Worlds, Claus Pias sets out to answer these questions. Tracing computer games from their earliest forms to the unstoppable commercial and cultural phenomena they have become today, Pias then provides a careful epistemological reconstruction of the process of playing games, both at computers and by computers themselves. The book makes a valuable theoretical contribution to the ongoing discussion about computer games.
